*Improvements in Sectional Book or other Cases.*

front edge, and a jointed coupling in slideable engagement with the rod and pivotal engagement with the door the point of attachment being on the inner side of the door and below its upper edge, substantially as shown.

8. In a case which is open on one side and is provided with a recess in the under side of the top adjacent to its front edge, a rod having at its front an angular portion the upper end of which engages the top rear of the recess therein, means for supporting the rod at its rear end, a horizontal sliding and vertically swinging door, flexible connections between the door and rod one end of said connections being attached to the door below its upper edge, substantially as shown.

9. A door connected to a case to slide horizontally therein and to be swung vertically to close the open end of the case, in combination with jointed and swinging connecting means attached pivotally at one end of the door below its upper edge when closed, a rod carried by the case which is encircled by one of the end portions of the connecting means, and a top for the case having a recess beyond the front end of the rod into which recess the upper edge of the door swings when its position is being changed from horizontal to vertical.

Dated this 12th day of June 1902.
